Enterprise Fluid Intelligence
for Predictive Maintenance

A Holistic Approach to On-site Oil Analysis

TruVu 360™ Enterprise Fluid Intelligence simplifies and streamlines the on-site oil analysis process, so high-quality information and actionable intelligence lead to effective decision making.

- Closes the gap between recommendations on the oil analysis report, maintenance actions taken and findings for continuous improvement
- Offers an intelligence dashboard so management has visibility into the effectiveness of the global program

The TruVu 360™ platform manages process, information flow and an intelligence dashboard with two components:

TruVu 360 Cloud Based Software

TruVu 360 Device Console (TDC)
with Minilab Test System

TruVu 360 Process Flow

**COLLECT A
REPRESENTATIVE
OIL SAMPLE
FROM ASSET**

**ON-SITE TESTS
WITH MINILAB &
TRUVU 360 DEVICE
CONSOLE (TDC)**

TruVu 360 Enterprise Fluid Intelligence platform delivers real benefits that meet business goals and objectives:

Speed

- Real-time reporting enables immediate decision making
- Rapid feedback for continuous improvement

Quality

- Highest quality information from freshly collected samples
- Simple process with fewer hand offs ensure higher quality data
- Lab-quality results on-site without the complexity of a traditional lab

Simplicity

- Intuitive interface with built-in intelligence
- Simple flow minimizes human error

Intelligence

- Closed loop feedback improves diagnostic accuracy over time
- Dashboard for management views of cost savings and program key performance indicators (KPIs)

**DIAGNOSTICS
AND
RECOMMENDATIONS
WITH TRIVECTOR**

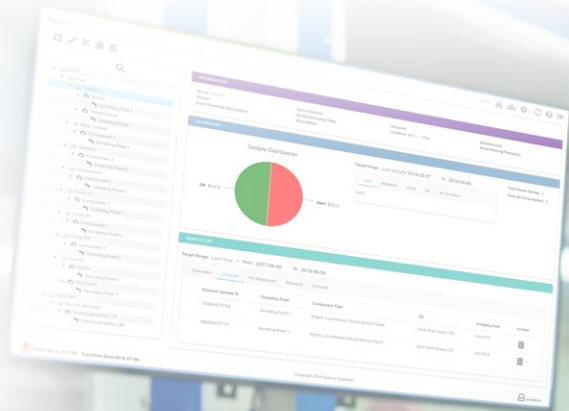

**ACTION
& CLOSED LOOP
FEEDBACK**

**ARCHIVE
FOR FUTURE
REVIEW**

Achieve More with Global Access to Local Intelligence

TruVu 360 Enterprise Fluid Intelligence addresses the need for standardizing workflows on a global scale and sharing data and intelligence across the enterprise.

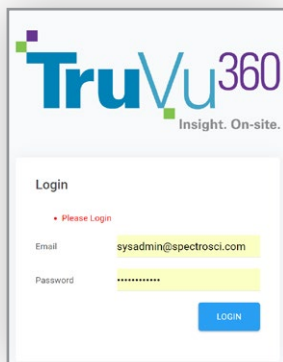

- One, standard on-site oil analysis process
- High-quality, actionable information applied locally to improve productivity and reduce costs
- Global intelligence accessible by users and management for continuous improvement

A True View of Process, Information and Intelligence

ASSET & TOOL BAR

- Create asset database with provided templates of component types
- Customize your own or import existing asset structure
- Assign pre-configured alarm limits that can be adjusted at the component level based upon operating history.
- Assess alarm trends to refine alarm limits.

DASHBOARD

Dashboards bring visibility of lubricant management and savings at the asset, plant and corporate level:

- Oil analysis results by category
- Total repair savings
- Total oil consumption

SAMPLE ANALYSIS PROCESS

- Track samples that are planned, in process and tested.
- Review results and software-generated observations and recommendations.
- Add additional notes and observations before sample report is released.

A Simple Path from Data to Intelligence

Intuitive TriVector™

Representation of oil analysis diagnostics.

- Is the oil dry?
- Is the oil clean/
free of dirt?

► Is the machine healthy?

► Can I predict when the
machinery will fail?

► Is it the right oil?

► Is the oil fit for use?

Adaptive Rules Engine

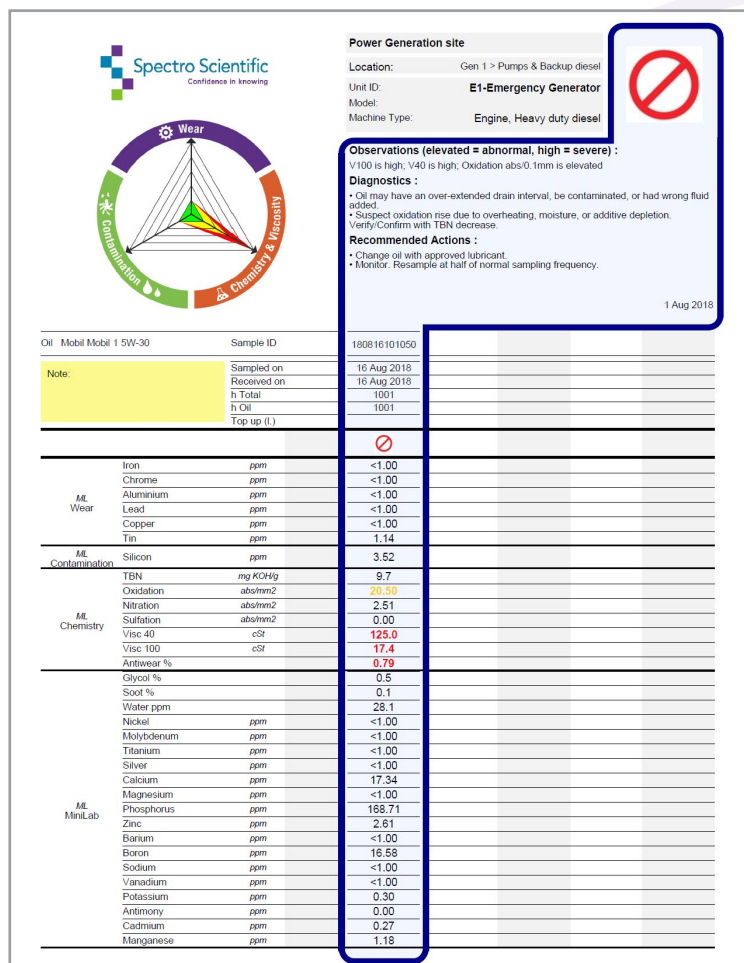

Open architecture allows user to easily customize rules for continuous improvement.

- Built-in limit tables for common components, customizable for each asset.
- Automate alarm codes, diagnostics and recommendation from rules engine.

ADAPTIVE RULES ENGINE (BETA) - DIAGNOSTIC STATEMENTS		
Turbine, Steam		
TriVector	Parameter	Diagnostic
Wear	Iron	Suspect source to be wear of shaft, reduction gear, bearings, piping, or structural components.
Wear	Lead	Suspect source to be wear of bearings, piping, or structural components.
Wear	Copper	Suspect source to be wear of bearings, bushings, or oil coolers.
Wear	Tin	Suspect source to be wear of shaft, reduction gear, bearings, piping, or structural components.
Wear	Total Ferrous	Suspect source to be wear of shaft, reduction gear, bearings, piping, or structural components.
Wear	Large Iron	Suspect source to be wear of shaft, reduction gear, bearings, piping, or structural components.
Wear	Fe Wear Severity Index	Suspect source to be wear of shaft, reduction gear, bearings, piping, or structural components.
Contamination	Boron	Suspect source to be contamination from water, or other sources.
Contamination	Silicon	Suspect source to be contamination from water, or other sources.
Contamination	Water, ppm	Suspect source to be water contamination.
Contamination	ISO 4406 Code (>4µm)	Suspect source of particulate contamination. Secondary sources include filter media, or other sources.
Contamination	ISO 4406 Code (>6µm)	Suspect source of particulate contamination. Secondary sources include filter media, or other sources.
Contamination	ISO 4406 Code (>14µm)	Suspect source of particulate contamination. Secondary sources include filter media, or other sources.
Chemistry	Calcium	Suspect contamination from system.
Chemistry	Phosphorus	Suspect contamination from system.
Chemistry	Zinc	Suspect contamination from system.
Chemistry	TAN	Suspect TAN increase due to localized hot spots.
Chemistry	Oxidation	Suspect oxidation rise due to localized hot spots.
Chemistry	Visc 40	Oil may be contaminated, see Viscosity.

TruVu 360 limit table grouped
by TriVector parameters

ADAPTIVE RULE ENGINE (BETA)							
Turbine, Steam							
Parameter	Limit Type	Abnormal	Severe	Reference Value	Maintenance Actions (Abnormal)	Maintenance Actions (Severe)	
Iron	Absolute	5	10		• Monitor. Resample at half of normal sampling frequency.	• Investigate equipment urgently.	
Lead	Absolute	3	5		• Monitor. Resample at half of normal sampling frequency.	• Investigate equipment urgently.	
Copper	Absolute	2	5		• Monitor. Resample at half of normal sampling frequency.	• Investigate equipment urgently.	
Tin	Absolute	5	10		• Monitor. Resample at half of normal sampling frequency.	• Investigate equipment urgently.	
Total Ferrous	Absolute	10	20		• Monitor. Resample at half of normal sampling frequency.	• Investigate equipment urgently.	
Large Iron	Absolute	0.1	0.2		• Monitor. Resample at half of normal sampling frequency.	• Investigate equipment urgently.	
Fe Wear Severity Index	Absolute	1	4		• Monitor. Resample at half of normal sampling frequency.	• Investigate equipment urgently.	
Boron	Absolute	15	20		• Monitor. Resample at half of normal sampling frequency.	• Investigate equipment urgently.	
Silicon	Absolute	5	10		• Monitor. Resample at half of normal sampling frequency.	• Investigate equipment urgently.	
Water, ppm	Absolute	100	200		• Monitor. Resample at half of normal sampling frequency. Check integrity of seals, breather, or cooler system coupling.	• Install a water removal system (vacuum dehydration) system. Check integrity of seals, breather, or cooler system coupling.	
ISO 4406 Code (>4µm)	Absolute	17	18		• Monitor. Resample at half of normal sampling frequency.	• Clean system oil by filtration or centrifuging.	
ISO 4406 Code (>6µm)	Absolute	14	15		• Monitor. Resample at half of normal sampling frequency.	• Clean system oil by filtration or centrifuging.	
ISO 4406 Code (>14µm)	Absolute	11	12		• Monitor. Resample at half of normal sampling frequency.	• Clean system oil by filtration or centrifuging.	
Calcium	Absolute	15	20		• Feed and bleed reservoir with correct lubricant.	• Change oil with approved lubricant. Check seal integrity.	
Phosphorus	Absolute	100	200		• Monitor. Resample at half of normal sampling frequency.	• Change oil with approved lubricant. Check seal integrity.	
Zinc	Absolute	10	25		• Monitor. Consider feed and bleed. Resample at half of normal sampling frequency.	• Investigate equipment urgently.

TruVu 360 solutions address common hurdles in implementing on-site oil analysis.

Conventional On-Site Lab	TruVu 360 Solutions
High capital investment	TruVu 360 enabled MiniLab costs about 1/3 of a full size laboratory
Large space and special facilities needed	Tabletop with no special facility requirements
Uses Hazmat chemicals	No hazardous chemicals and reagents, small sample volume, minimum waste stream
Lubricant experience required	TriVector report, built-in oil scheduling, easy-to-use interface, default component and alarm limit templates, open rule engine for quick startup and continuous improvement
Start up time can take months	TruVu 360 based MiniLab start up is less than one week

MiniLab tests are all compliant to ASTM standards

TEST	METHOD	TITLE
Elemental Analysis	D6595	Standard Test Method for Determination of Wear Metals and Contaminants in Used Lubricating Oils or Used Hydraulic Fluids by Rotating Disc Electrode Atomic Emission Spectrometry
Particle Analysis	D7596	Standard Test Method for Automatic Particle Counting and Particle Shape Classification of Oils Using a Direct Imaging Integrated Tester
InfraRed Analysis	D7889	Standard Test Method for Field Determination of In-Service Fluid Properties Using IR Spectroscopy
Fuel Dilution	D8004	Standard Test Method for Fuel Dilution of In-Service Lubricants Using Surface Acoustic Wave Sensing
Viscosity	D8092	Standard Test Method for Field Determination of Kinematic Viscosity Using a Microchannel Viscometer
Total Ferrous	D8120	Standard Test Method for Ferrous Debris Quantification

TruVu 360 Device Console Simplifies On-Site Testing

TruVu 360 User Community

Continuous education is important for a successful on-site lubricant program. With ever growing articles, videos, and structured learning modules, TruVu 360 user community is a digital community for users to share, communicate and learn the best practices of doing oil analysis on site.

SpectroCare

SpectroCare is a service designed to provide the best customer experience using TruVu 360 enabled solutions, which include:

- Onboarding/startup service
- Expedited customer support response
- Unlimited software upgrade
- Annual preventive maintenance and calibration
- Extended warranty
- Off-site laboratory support for emergency and special diagnostics from our partner labs worldwide

TruVu 360 Product Information

PART NUMBER*	
750-00138	TruVu 360 Software Suite
100-00741	TruVu 360 Site license, 1 year
100-00744	TruVu 360 Enterprise license, 1 year
100-00747	TruVu 360 Site Reader license, 1 year
100-00795	TruVu 360 Hosted Services (1 year)
SYSTEM REQUIREMENTS	
Computer	Quad core microprocessor speed 2.6 GHz or higher and 8 GB RAM minimum.
Operating System	Windows 7 Pro or Win 10, 32 or 64 bit, US English version.

*MiniLab with TruVu 360 part numbers are in the corresponding MiniLab brochures.
